

SUBJECT INDEX

A

- abscisic acid
 - cytokinin metabolism, 169
 - guard cells, 445-46, 450, 454, 457
 - stomatal responses, 464-65
 - Acacia hebecclada*
 - arabinogalactan-protein, 50
 - Acer pseudoplatanus*
 - myo-inositol 1-phosphate synthase, 142
 - O-Acetylserine, 172
 - Adenine
 - zeatin formation, 186
 - Adenine nucleotide ratios and adenylate energy charge, 199-224
 - adenylate energy charge, 200
 - concept, 201
 - adenylate kinase, 206
 - compartmentation, 207
 - K_{app} modification, 206-7
 - mass action ratio, 206
 - compartmentation, 212
 - relationship between chloroplast and cytosol, 213-14
 - relationship between mitochondria and cytosol, 212-13
 - conclusions, 217
 - enzyme activity control, 201-2
 - glycolysis, 204-5
 - other enzymes, 205-6
 - photosynthetic carbon dioxide fixation, 202-4
 - starch metabolism, 204
 - tricarboxylic acid cycle, 205
 - introduction, 199-201
 - metabolic regulation, 200
 - methods for in vivo studies, 207-8
 - assays, 209-10
 - cell compartments separation, 210-11
 - enzyme inactivation and nucleotide extraction, 208-9
 - fast filtration of protoplasts, 211
 - intact tissue fractionation in apolar medium, 210
 - sampling, 208
 - silicone oil fast centrifugation of protoplasts, 210
 - nongreen cells with limited metabolic activity, 214
 - anoxia, 215
 - hypoxia, 216-17
 - nucleotides in actively metabolizing tissue, 211-12
- Adenosine kinase, 172
- Adenosine phosphoribosyltransferase, 172
- Adenosine phosphorylase, 172
- Adenosine ribohydrolase, 172
- Adenylate kinase
 - compartmentation, 207
 - K_{app} modification, 206-7
 - mass action ratio, 206
- Agrobacterium tumefaciens*
 - cytokinin in tRNA, 177
 - breakdown, 183
 - cytokinin production, 175
- Alcaligenes eutrophus*
 - hydrogenase, 116
 - nickel content, 117
 - nickel requirement, 116
 - plasmids, 119
- Alnus glutinosa*, 124
- hydrogen evolution, 107
- Alocasia macrorrhizos*
 - arabinogalactan-proteins, 49
- 3-(3-Amino-3-carboxylpropyl)-IP, discadenine, 173
- 8-Aminolevulinic acid, 242, 261, 264, 266-68
 - formation, 244
 - from five-carbon precursors, 246-48
 - from glycine and succinyl-CoA, 244-46
 - proposed schemes, 245
 - regulation, 261, 263, 265
- Aminolevulinic acid dehydratase, 248, 266
- Aminolevulinic acid synthase, 244-46, 265
- Anabaena*
 - azollae*, 115, 124
 - cylindrica*, 108
 - hydrogen evolution, 107
 - nitrogenase protection, 124
- flos-aquae*
 - chlorophyll a-P700 complex, 30
- variabilis*
 - bicarbonate transport and membrane potential, 180-81
 - cell wall modification, 87
 - inorganic carbon accumulation, 89
 - inorganic carbon concentration, 79
 - nitrogenase protection, 124
 - photosynthesis inhibition, 88, 93
- Anthocyanidin, 398
- Anthocyanin, 398-400
- Anthranilate synthetase, 335
- Apical cell concept, 419-40
 - bryophytes, 420
 - liverworts, 420-21
 - mosses, 421-25
- ferns and equisetum
 - apical zonation, 434
 - conclusions on root apex studies, 429-30
 - conclusions on shoot apex studies, 436-37
 - division types, 431-34
 - experimental and quantitative studies, 434-36
 - mitotic quiescence, 427
 - root apex histogenesis, 425-26
 - root apex studies, 426-29
 - shoot apex histogenesis, 430-34
- introduction, 419-20
- Apoplast, 348, 350, 353
- pH, 365
- sucrose entry, 351
 - nature, 356-58
- sugar entry, 353-55, 366, 378
- nonpermeable probe, 355
- vs symplastic pathway, 355
- Arabinofuranose, 50
- Arabinogalactan-proteins, 47-70
 - biosynthesis, 60-61
 - arabinogalactan polysaccharide, 61-62
 - peptidyl-protein hydroxylation, 61
 - protein precursor RNA translation, 61
 - subcellular location, 62-63
 - turnover, 63
- cell wall glycoproteins and lectins of Solanaceae, 58
- composition, 59

- isolation, 58-59
 structure, 59-60
 complexing reactions
 antisera interactions, 58
 artificial carbohydrate anti-
 gen interactions, 57-58
 lectin interactions, 58, 64
 conclusions, 65
 distribution
 cellular localization, 49-50
 plants, 48
 tissue distribution, 49
 function, 63
 animal glycosaminoglycans
 analogy, 64-65
 informational potential, 64
 morphogenesis control, 65
 potential for specific in-
 teractions, 63-64
 water-holding capacity, 64
 introduction, 48
 structures
 chemical composition and
 physical properties, 52-53
 comparative properties, 55
 composition, 50
 figure, 51
 galactan framework special
 features, 50-51
 general features, 50
 hypothetical structure, 54
 isolation, 56
 physical properties, 56-57
 protein core, 51, 54-56
 substituents' nature, 51
 Arginosuccinate synthetase, 205
 Arnold, Bill, 8
 Aspartate, 447
 ATP
 phloem loading, 371-72
 solute transport stimulation,
 358
 ATP-regenerating pathways
 regulatory enzymes, 201
 ATP-utilizing pathways
 enzymes, 201
 ATP synthase, 212-13
 genes for subunits, 298-99
 ATPase, 362, 365-66
 sucrose loading, 366-67, 374,
 379
 Auxin, 337
 ethylene, 226, 228, 232, 235
 antagonism, 236
 flower sex, 405-6
 lateral cell expansion, 235
Azospirillum brasilense, 124
 C_2H_2 reduction, 125
 hydrogen evolution, 108
Azotobacter
chroococcum
 hydrogenase, 116, 118
 hydrogenase protection, 124
 nickel and hydrogenase
 synthesis, 117
 uptake hydrogenase, 122
vinelandii
 H_2 -dependent ATP synth-
 esis, 124
 hydrogen evolution, 107
 hydrogenase system, 106
- B**
- Bacteriochlorophyll, 23-28
 Bacteriopheophytin, 23-24, 27-
 28
 photoreduction, 29
 6-Benzyl-aminopurine, 164,
 168, 170-71, 181
 active form, 180
 derivatives activity, 169
 metabolites, 164-65
 stability, 178
 Bicarbonate
 see Photosynthetic assimila-
 tion of exogenous bicar-
 bonate
 Bogorad, Lawrence, 9
 Bornesitol, 153
 Boxer Indemnity Scholarships, 2
 Branton, Daniel, 9
 Bryophytes
 see Apical cell concept
 Burr, George O., 3
- C**
- C550, 36
 Calcium
 sucrose efflux, 358
 Cannon, Walter B., 8
 Carbon dioxide, 462-63
 guard cells 445-46, 450, 454-
 55, 457
 proton extrusion, 461
 photosynthetic fixation
 metabolic control, 202
 stomatal response, 460, 463-
 64
 Carbonic anhydrase, 76
 β -Carotene, 31-32, 36
 Cell walls
 ethylene effect on biochemis-
 try, 230-33
 Cellulase, 235
 Cellulose
 microfibril orientation
 cell expansion, 228-29
 colchicine effect, 234
 ethylene effect, 229, 233
 synthesis inhibition by 2,6-
 dichlorobenzonitrile, 234
Ceratium hirudinella
 photosynthetic rates, 80
 Chailakhyan, M. Kh., 17
Chara corallina
 bicarbonate transport
 hypothesis, 84-85, 89-90
 regulation, 93
 exogenous bicarbonate assi-
 milation, 78, 91
 extracellular CO_2 production
 model, 85
 invalidity, 90
 OH^- efflux, 94
 Charasome, 87
 Chemiosmosis, 449, 458
 Cheng, B. L., 12
 Chilling resistance basis, 338
Chlamydomonas reinhardtii
 chlorophyll *a*-P700 complex,
 30
 inorganic carbon concentra-
 tion, 79
 photosystem II composition,
 31
 Chloride, 449, 458
 efflux
 abscisic acid effect, 465
 stomatal movement, 447, 450
p-Chloromercuribenzenesul-
 fonate, 376
 sucrose uptake studies, 366-
 69, 371
p-Chloromercuribenzenesulfonic
 acid, 355
 Chlorophyll *a*, 35-36, 256-58,
 268, 453
 biosynthesis regulation, 262
 chromophores, 259-60
 P700 complex, 30
 photosystem II, 32
 Chlorophyll *b*, 30-32, 254-56
 Chlorophyll biosynthesis, 241-
 78
 aminolevulinic acid formation,
 244
 from dioxovaleric acid, 245
 from five-carbon precursors,
 246-48
 from glutamic acid-1-
 semialdehyde, 247-48
 from glycine and succinyl-
 CoA, 244-46
 proposed schemes, 245
 aminolevulinic acid to pro-
 toporphyrin IX, 248-49
 chlorophyll *b* and chlorophyl-
 lide *b*, 254-56
 heterogeneity of chlorophylls
 and precursors, 256-57
 intermediates esterification,
 260-61
 other optically detectable
 heterogeneity, 258-60
 4-vinyl vs 4-ethyl, 257-58
 introduction, 242

- isocyclic ring formation, 250
 dark reaction, 252-53
 light catalyzed, 251-52
 light and hormone effects on regulation
 cytokinin pretreatment, 268
 phytochrome, 267-68
 summary, 269
 magnesium chelation, 249-50
 pathway outline, 242-44
 diagram, 243
 phytylation, 253-54
 regulation at enzyme level, 261
 aminolevulinic acid, 261
 chlorophyll precursors turnover, 266-67
 figure, 262
 heme synthesis, 265
 heme turnover, 266
 isocyclic ring formation, 265
 magnesium chelation, 263-64
 magnesium-protoporphyrin IX methyl esterase, 264-65
 protochlorophyllide, 267
 Chlorophyllase, 253
 Chlorophyllide, 253, 267
 Chlorophyllide *a*, 257
 Chlorophyllide *b*, 254-56
 Chloroplast
 adenine nucleotide compartmentation
 relationship with cytosol, 213-14
 adenylate kinase, 207
 ATP half life, 208
 cytokinins in tRNA, 177
 guard cells
 Paphiopedilum lack, 457
 photophosphorylation, 452-55, 463-65
 separation from protoplast, 210
 Chloroplast genes structure and organization, 279-310
 conclusions, 302-3
 DNA sequence organization, 280-83
 available restriction maps, 281
 conservation, 282
 spinach map, 282
 gene for large subunit of RuBP carboxylase, 295-97
 sequence comparison, 296
 gene for thylakoid membrane protein, 297-98
 gene mapping procedures, 293-94
 gene probes, 295
 hybrid arrest and hybrid release translation, 294-95
 transcription and translation, 294
 genes for ATP synthase subunits, 298-99
 genes for rRNA
 organization, 283-84
 5S rDNA, 287
 16S rDNA, 284-85
 16S-23S rDNA spacer, 287-88
 23S rDNA, 285-87
 introduction, 280
 other characteristics of sequences
 codon usage, 299
 promoter sequences, 299-300
 transcription terminator sequences, 301
 translation initiation, 301
 tRNA genes
 clusters, 288-89
 genes in 16S rDNA leader sequence, 290-91
 genes in 16S-23S rDNA spacer region, 291-92
 introns, 292-93
 mapping, 288, 292
 maps, 289-90
Chlorobium limicola
 reaction center primary donor, 26
Chromatium vinosum, 22
 cytochrome *c*, 24
 stable electron acceptor X, 26
 Citrate, 447
Clostridium pasteurianum
 hydrogenase, 107
Coccochloris penicystis
 CO₂ fixation rate and pH, 80
 Colchicine, 428
 pea internode expansion change, 234-35
Commiphora mukul
 arabinogalactan-proteins, 49
 Compactin, 182
 Companion cells, 356-57, 359, 364, 374
 modification into transfer cells, 362
 plasmodesmata, 352-53
 sucrose translocation, 359, 361
 Cooper, William S., 4
Corynebacterium fascians
 cytokinin production, 175
 Crozier, W. J., 5-9
Cucurbita pepo
 sucrosyl oligosaccharides biosynthesis, 151
 Cytochrome
 involvement in hydrogen metabolism, 123-24
 Cytochrome *b₆*, 31
 Cytochrome *b₅₅₉*, 32
 Cytochrome *c*
 photosynthetic reaction centers, 24
 Cytochrome *f*, 31
 Cytochrome oxidase, 7-8
 Cytokinin, 329, 465
 effect on chlorophyll biosynthesis, 268
 flower sex, 406
 habituation, 336-37
 pea internode expansion, 235
 Cytokinin-binding protein, 179
 Cytokinin biosynthesis and metabolism, 163-97
 biosynthesis
 alternative mechanisms, 184
 cytokinins in tRNA, 181
 free cytokinins, 183-87
 isopentenylolation, 182
 conclusions, 187-89
 enzymes and metabolite formation, 170
 base, nucleoside, and nucleotide interconversion, 172-73
 β-(9-cytokinin)alanine synthase, 171-72
 cytokinin 7-glucosyltransferase, 171
 cytokinin oxidase, 170-71
 exogenous cytokinins
 metabolite formation in plant tissue, 165-69
 metabolite identity, 164-65
 introduction, 163-64
 metabolite significance, 179-81
 active forms, 180
 forms, 179
 storage form, 180
 metabolite stability, 177-79
 naturally occurring cytokinins
 cytokinins in tRNA, 175-77
 free cytokinins, 173-75
 identification, 174
 schematic representation, 188
 selected synthetic cytokinins, 169-70
 β-(9-Cytokinin)alanine synthase, 171-72
 Cytokinin 7-glucosyltransferase, 172
 activity, 171
 Cytokinin oxidase, 168, 172, 178
 activity, 170-71
 characteristics, 170

- Cytokinin synthase, 185
 Cytosol, 202, 207, 210-11
 adenine nucleotides compartmentation
 relationship with chloroplasts, 213-14
 relationship with mitochondria, 212-13
- D**
- Davis, Hallowell, 6
Desulfovibrio gigas
 hydrogenase and nickel, 117
 Deuterium oxide, 235
 2,6-Dichlorobenzonitrile
 pea internode expansion change, 234
Dictyostelium discoideum
 free cytokinins, 185
 Dimethylloxazolidinedione, 79, 372
 γ -Dioxovaleric acid, 242
 Dioxovaleric acid transaminase, 247
 N,N'-Diphenylurea, 169
 DNA
 apical cells, 429, 434-36
 see also Chloroplast genes
 structure and organization
Drechslera maydis race T
 toxin resistance, 340
Drosophila melanogaster
 cytokinin in tRNA, 176
 Duckweed
 phytate accumulation, 148
- E**
- Elodea canadensis*
 bicarbonate transport regulation, 93
densa
 buffer effect on photosynthesis, 89
 Emerson, Bob, 7-8
 Emerson, Ralph Waldo, 8
 Epicuticular wax, 408
Equisetum
 root apex
 experimental and quantitative studies, 426-29
 concluding remarks, 429-30
 histogenesis, 425-26
 shoot apex
 apical zonation, 434
 concluding remarks, 436-37
 experimental and quantitative studies, 434-36
 histogenesis, 430-34
Escherichia coli, 123
 adenylate energy charge, 215
 cytokinin in tRNA, 176
 transferase enzyme, 182
- Ethylene
 flower sex, 406
 Ethylene and pea internode expansion regulation, 225-40
 cell wall biochemistry, 230-33
 enzymes, 232
 xyloglucan, 231-32
 conclusions, 236-37
 induction kinetics, 227-28
 introduction, 225-27
 pea response to ethylene, 225-26
 research systems, 226-27
 microtubule and cellulose microfibril orientation, 228-30
 other lateral expansion inducers, 234-36
 auxin, 135-36
 colchicine, 234
 cytokinins, 235
 deuterium oxide, 235
 2,6-dichlorobenzonitrile, 234
 gibberellic acid, 236
 wall extensibility and proton secretion, 233-34
- Eudorina californica*
 arabinogalactan-protein, 49
Euglena gracilis
 myo-inositol 1-phosphate synthase, 142
- F**
- Fairbank, John and Wilma, 9
 Ferns
 root apex
 concluding remarks, 429-30
 experimental and quantitative studies, 426-27
 histogenesis, 425-26
 shoot apex
 apical zonation, 434
 concluding remarks, 436-37
 experimental and quantitative studies, 434-36
 histogenesis, 430-34
 Ferredoxin, 34, 109
 Ferrochelatae, 265
 Flavodoxin, 109
 Fontanne, Lynn, 4
Fontinalis anti-pyretica
 arabinogalactan-protein, 49
 French, Stacy, 8-9
 Fructose, 363-64, 368, 371
 β -Fructoside, 363
 Fusicoccin, 368, 445, 449, 455, 466
 fluorescence induction, 459-61
 stomatal opening, 461
 kinetics, 451-52
